Abstract

Data is a source of knowledge for business. Mining knowledge from data to create value in the competitive business environment requires the use of specialized software. This software should be able to handle both large volumes of data and analysis tools (statistical methodologies, charts etc.) quickly and efficiently. In this book an attempt is made to present the RapidMiner software

as a software that serves the above purposes. Studying the book aims to help the reader to get acquainted with the environment and functions of RapidMiner, as well as its applications to real problems. The author's ambition is to introduce the reader, in a simple and understandable way, to the use of RapidMiner software and how to apply it to specialized business questions.
