

METADATA

Title: Engineering Interactive Systems

Other Titles: -

Language: Greek

Authors: Chorianopoulos, K., Associate Professor, Ionian University

ISBN: 978-618-228-067-6

Subject: MATHEMATICS AND COMPUTER SCIENCE

Keywords: Human-Computer Interaction / Usability / Interaction Design / Information Visualization / Computer supported collaborative work

Bibliographic Reference: Chorianopoulos, K. (2024). Engineering Interactive Systems [Undergraduate textbook]. Kallipos, Open Academic Editions. <http://dx.doi.org/10.57713/kallipos-298>

Abstract

This book is intended for those who design and build software systems for human-computer interaction. It is useful to both professionals and students of informatics, engineering and design courses, as well as related disciplines. Firstly, the reader learns about interaction design beyond simple usability

and ergonomics. The reader will also learn about the engineering of the minimum feasible product and about collaborative systems. The book chapters contain biographies as well as research efforts and commercial case studies that refer to practical applications in areas of timely interest.
