Abstract

The textbook is a valuable aid for the reader in the course "Network and Internet Application Security", the aim of which is to familiarize the reader with the protection requirements of modern information and communication systems and to learn basic techniques of information security

during the teleprocessing and electronic transfer of information on the Internet, e.g. by using cryptology and not only. The textbook also includes laboratory exercises and activities to give the student the opportunity to gain experience in the application of the above techniques.
