

## METADATA

**Title:** Analysis of multivariate techniques

**Other Titles:** Case studies

**Language:** Greek

**ISBN:** 978-960-603-140-3

**Subject:** MATHEMATICS AND COMPUTER SCIENCE

**Keywords:** Multivariate Analysis / Multiple Regression / Ordinal Regression / Multinomial Regression / Regression Diagnostics

**Bibliographic Reference:** Petridis, D. (2015). Analysis of multivariate techniques [Undergraduate textbook]. Kallipos, Open Academic Editions. <http://dx.doi.org/10.57713/kallipos-797>

### Abstract

The writing of this book is addressed to all scientists engaged in research at the undergraduate, postgraduate, and doctoral levels. The content deals with the most popular methods of applying multivariate techniques, enriched with a plethora of examples stemming

from the author's extensive experience with similar research published in internationally renowned journals. The examples concern case studies from various scientific fields: Food Science, Aquatic Ecology, Social Sciences and Education, Medical Science.
