

## METADATA

**Title:** Introduction to Atmospheric Physics

**Other Titles:** Introduction to selected topics of physics of the lower atmosphere

**Language:** Greek

**ISBN:** 978-960-603-143-4

**Subject:** NATURAL SCIENCES AND AGRICULTURAL SCIENCES

**Keywords:** Atmospheric Physics / Solar And Terrestrial Radiation / Atmospheric Electricity / Atmospheric Thermodynamics / Cloud Physics

**Bibliographic Reference:** Haldoupis, C. (2015). Introduction to Atmospheric Physics [Undergraduate textbook]. Kallipos, Open Academic Editions. <http://dx.doi.org/10.57713/kallipos-673>

### Abstract

The present book in Greek, entitled "Introduction to Atmospheric Physics", presents selective topics of atmospheric science, by applying simple mathematical approaches and comprehensive physical descriptions. Besides the 1st chapter which offers a basic overview on the earth's atmosphere, the book's contents are distributed in 6 chapters, each dealing with a thematic branch, mostly in relation with the physics

of the lower atmosphere. The chapters here include elements of: atmospheric hydrostatics, thermodynamics, cloud physics, atmospheric dynamics, atmospheric electricity, and solar/terrestrial radiation effects in the atmosphere. This book is useful to undergraduate students of physics, but also to students enrolled in disciplines of natural sciences, who take an introductory course in atmospheric science.
