Abstract

The book deals with Pediatric Surgery and Pediatric Urology, outlining the basic principles of diagnosing and treating various congenital abnormalities of the digestive, respiratory, and genitourinary systems in neonates, infants, and children. It also addresses solid tumors of childhood, traumatic injuries

to solid organs, as well as other acquired diseases that may occur during childhood. Additionally, it refers to new technologies such as LASER, endoscopies, and minimally invasive surgery in children (laparoscopic, thoracoscopic, robotic Pediatric Surgery, endoscopic laparoscopic pediatric urology).
