### Abstract

Electronic health and welfare services are the part of e-government that deals with sensitive areas of quality of life. The book is aimed at those interested in learning about the possibilities of new forms of medical science and promoting the quality of life of the population by utilizing new technologies. The book can be used as a textbook in courses related to medical informatics, e-health, telemedicine, and health unit management for students in medical and technology

departments. The author's ambition is that the book will be of interest to: 1) Health scientists concerned with the use of new technologies in their daily practice. 2) Information and telecommunications engineers working in the health sector or with an interest in this field. 3) Information scientists who wish to learn about the influence of their science on health. 4) Young researchers with a vision to create tools that will promote quality of life and social cohesion.
