Emergency treatment [Undergraduate textbook]. Kallipos, Open Academic Editions. <http://dx.doi.org/10.57713/kallipos-926>

Abstract

This textbook concerns monitoring and the basic principles governing the management and treatment of severely ill patients. Initially it refers to the monitoring of systems, basic principles of treatment and then deals

more specifically with basic therapeutic and diagnostic interventions in patients, such as: mechanical respiratory support, hemodynamic intervention, treatment of shock and other specific emergency conditions.
