Language: Greek

ISBN: 978-960-603-298-1

Subject: MEDICINE AND HEALTH SCIENCES, LIFE SCIENCES, BIOLOGICAL SCIENCES, ENGINEERING AND TECHNOLOGY

Keywords: Esthetic / Colour / Properties of colour / Prosthetic restorations / Optical behavior of restorative materials

Bibliographic Reference: Galiatsatos, A. (2015). Basic principles of dental aesthetics [Undergraduate textbook]. Kallipos, Open Academic Editions. <http://dx.doi.org/10.57713/kallipos-947>

Abstract

Nowadays, dental science aims not only to restore the integrity of damaged hard dental tissues, but also to achieve the best possible aesthetic appearance of the oro-facial vision. Consequently, both modern dentists and dental technicians must have excellent knowledge of aesthetics in order to apply it in their respective fields of work. This textbook provides a thorough analysis and description of all the factors, properties, and characteristics of color that influence

both its assessment and measurement. All of this is essential basic knowledge for those involved in the aesthetic restoration of the mouth and teeth, enabling them to achieve their goals. This book includes all the information deemed necessary for a comprehensive understanding of the subject, while omitting topics on which researchers' opinions differ. All chapters contain numerous images and diagrams to facilitate understanding of all the information provided.
